

Creating an Itinerary Form Workflow Using Gemini and Automation Tools

Objective: Build a workflow where a user submits a form with their travel details, and an automated system generates an itinerary using Gemini, stores it in Google Docs, and sends it to the user's email using Zapier, Google Forms, Gemini AI, Google Docs, and Gmail.

Tools to be Used:

- **Google Forms** (to collect user inputs)
- **Zapier** (for automation between apps)
- **Gemini AI** (to generate the travel itinerary)
- **Google Docs** (to save the generated itinerary)
- **Gmail** (to send the itinerary to the user)

Workflow Steps:

1. **Create a Google Form** to collect the following details:
 - Name
 - Email Address
 - Travel Date
 - Budget
 - Destination
 - Duration (Number of Days)
 - Start date
2. **Set up a Zap in Zapier:**
 - **Trigger:** New Form Response in Google Forms.
 - **Action 1:** Send collected data to Gemini AI.
 - Provide a prompt to Gemini to generate a personalized itinerary based on the collected details.
 - **Action 2:** Create a new Google Doc.
 - Title: [User's Name] - Travel Itinerary
 - Content: The generated itinerary from Gemini.
 - **Action 3:** Send an email via Gmail.
 - To: The email address submitted in the form.
 - Subject: "Your Customized Travel Itinerary"
 - Body: A short message thanking them for using the service and attaching or linking the Google Doc. Be sure to be personalized.

Submission Requirements:

- A fully functional Google Form.
- A flow diagram/ Blueprint.

- A working Zapier workflow that connects Google Forms -> Gemini -> Google Docs -> Gmail.
- A sample output (Google Doc and email screenshot).

Deadline: 20-10-2025

Notes:

- Ensure the prompts given to Gemini AI are clear and structured.
- Format the Google Doc professionally.
- Test the workflow at least 3 times with different data to ensure reliability.
